UPGRADING SUNSHINE

NEW LED-TUBES

With the innovative LED Tubes and perfectly balanced LED facials, you experience light on a whole new level. Perfectly balanced wavelengths ensure an even, skin-friendly tan with visibly impressive results.

A wide range of megaSun tanning systems allows you to achieve up to 30% more UVA output with the LED Tubes, combined with powerful red light LEDs. Additional UVB LEDs integrated into every tube enhance your skin's natural radiance — creating a luminous, sun-kissed glow that ranges from rich and deep to beautifully perfected.

KEY BENEFITS AT A GLANCE:

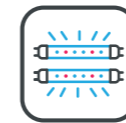

- // No lamp replacements required for up to 20,000 hours of operation
- // Flexible output settings for customized tanning preferences (Sensitive, Medium, Intensive)
- // A pleasant and relaxed temperature sensation during the session
- // A smoother skin feeling thanks to an additional wavelength in the red light spectrum
- // Reduced energy consumption

LED-UPGRADE

LED-UPGRADE FACIALS & SHOULDERS

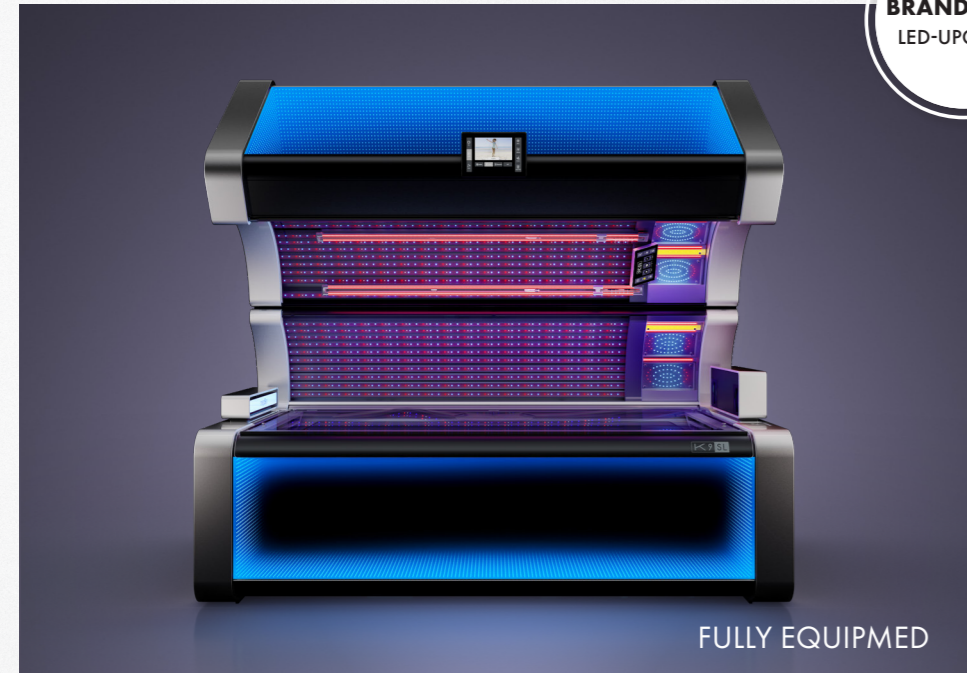

The K9S continues its evolution — receiving improvements with a clear focus on performance, precision, and a new level of tanning comfort. Inspired by the outstanding success of the K11 Air, it now features the latest LED technology in the Facial & Shoulder area. An innovation that sets new benchmarks while simultaneously creating the technological foundation for the continued evolution of the entire K-Series and additional megaSun series.

A newly developed Facial System equipped with high-performance UVA and UVB LEDs delivers exceptional performance, resulting in in greater tanning results. With 10% more UVA output, the result is a tanning experience that perfectly balances efficiency and aesthetics. The K9SL takes this concept one step further. Additional Red Light LEDs expand

the system with an entirely new wellness dimension. The result is an experience that is not only visibly impressive, but also noticeably effective — gentle, modern, and exceptionally intensive.

The convincing results of this LED composition open up new possibilities across the entire megaSun device portfolio. Models such as the P9SL, K7SL, and A6SL can also be equipped with the latest LED technology. A fully integrated system combining UVA, UVB, and Red Light LEDs — individually controllable, optionally dimmable, and precisely tuned for maximum performance.
